Professional Summary

Computer Science graduate and **backend-focused engineer** who ships **production services** end-to-end — from **Java** and **Spring Boot** microservices to automated **CI/CD** delivery. Strong in **REST API design**, **test-driven development**, and debugging under real conditions within **Agile** teams.

Technical Skills

Languages	Java, Python, SQL, JavaScript
Backend & APIs	Spring Boot, REST API design, Microservices, SparkJava, Spock, TDD, Unit & Integration Testing
DevOps & Cloud	Docker, CI/CD (GitHub Actions, Azure DevOps), Git, Agile Scrum
Databases & Data	PostgreSQL, MySQL, Redis, jOOQ, Pandas, NumPy
Practices	Log-based debugging, Root-cause analysis, Code validation, Technical documentation

Experience

DevOps Trainee — NIX, Budapest, Hungary *Feb 2025 – Feb 2026*

- Built and maintained **CI/CD pipelines** (**GitHub Actions**, **Azure DevOps**) automating build, test, and deploy for **6+ services**, cutting deployment time from ~20 minutes to **under 5 minutes**.
- Containerized **8 internal services** with **Docker**, eliminating recurring environment-mismatch failures during releases.
- Diagnosed and resolved **15+ post-deployment issues** per sprint via **log analysis**, and authored **10+ runbooks** that reduced repeat incidents.

Java Trainee, Backend — NIX, Budapest, Hungary *Jul 2024 – Jan 2025*

- Developed and tested **5+ backend microservices** in **Java 17** and **Spring Boot** using a **TDD** approach, maintaining ~**80% test coverage**.
- Shipped **20+ REST API endpoints** and resolved **25+ bugs** in production-facing services.
- Root-caused application issues across dev and test environments by reproducing failures and analyzing logs.

Bioinformatics Research Intern — University of Debrecen, Hungary *Jul 2024 – Sep 2024*

- Built **Python** data pipelines (**Pandas**, **NumPy**) to process **10,000+ records**, automating manual data handling and adding validation checks; documented **6+ reproducible workflows**.

Projects

PayFlow — Payment Processing & Fraud-Detection *Java 17, Spring Boot, PostgreSQL, Redis, Kafka, Docker API*

- Built a **Spring Boot** payments service with **idempotent endpoints** (safe against duplicate submission via an idempotency key and a DB unique constraint) and a pluggable, **rule-based fraud engine** returning **APPROVE / REVIEW / DECLINE**.
- Implemented **rate limiting** and **event publishing** behind interfaces with in-memory defaults and **Redis / Kafka** implementations selected by Spring profile; secured endpoints with stateless **JWT authentication**.
- Achieved ~**88% line coverage** (JaCoCo) across **20 JUnit** and **Spock tests** under a **TDD** workflow; containerized with **Docker Compose** and automated build and test via a **GitHub Actions CI** pipeline.

Expense Tracker REST API — CRUD & Spend Analytics *Java 17, Spring Boot, PostgreSQL, JUnit, Docker*

- Built a **JWT-secured REST API** with full **CRUD** and a **category-spend summary** endpoint, enforcing **per-user data isolation** and request validation; backed by **PostgreSQL** with **H2** for zero-dependency local runs.
- Achieved ~**93% line coverage** (JaCoCo) across **13 JUnit** and **Spring MockMvc tests**; multi-stage **Docker** build automated through a **GitHub Actions CI** pipeline.

Education

BSc Computer Science & Engineering — University of Debrecen, Hungary *Sep 2021 – Jan 2026*

CGPA: 4.2 / 5.0 (equivalent to a UK upper-second / 2:1). Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Systems, IT Security, Intro to AI.

Certifications

- Professional & Cloud:** Microsoft Certified: Azure Data Fundamentals (DP-900); IT Specialist — Software Development, Java, and HTML & CSS (Pearson / Certiport).
- NVIDIA Deep Learning Institute:** Building Agentic AI Applications with LLMs, Fundamentals of Deep Learning, Generative AI with Diffusion Models, Computer Vision for Industrial Inspection, Predictive Maintenance, Anomaly Detection, Accelerating Data Engineering Pipelines, Fundamentals of Accelerated Data Science.
